Project Name	FitBuddy - AI Fitness Plan Generator using Gemini Models
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

FitBuddy is a web-based application that uses generative AI to create a personalized 7-day workout plan and a concise nutrition or recovery tip from user fitness inputs. Users can also submit feedback so the system can produce an updated plan.

Proposed solution workflow

Step	Process	FitBuddy implementation
1	User enters profile	Name, ID, age, weight, goal and intensity.
2	Validate and route	FastAPI receives form data; Pydantic validates it.
3	Generate workout	Gemini 1.5 Pro returns the structured 7-day plan.
4	Generate tip	Gemini Flash returns a concise goal-aligned tip.
5	Persist results	SQLite + SQLAlchemy store user details and plan.
6	Refine with feedback	Gemini Pro revises the original plan using feedback.
7	Admin monitoring	/view-all-users shows users and original/updated plans.

Key value proposition

A single browser-based workflow combines profile-based workout generation, complementary nutrition guidance, feedback-driven revision and persistent storage.
