Maximum Marks	1 Mark

Scalability & Future Plan

The current source documents a local SQLite/Uvicorn setup. The roadmap below separates present limitations from future improvements.

Current State -> Future Improvement

Database SQLite local file. Future: PostgreSQL / managed relational database.	User load Local Uvicorn process. Future: Managed ASGI hosting + horizontal scaling.	Performance No formal load benchmark. Future: Load testing, caching and async processing.	Security Environment-based API key. Future: Authentication, authorization and stronger secret management.	Product scope Core fitness plan workflow. Future: Analytics, richer personalization, mobile interface.
---	---	---	---	--

Priority note: Authentication and database scalability are immediate hardening areas; performance benchmarking is needed before production-capacity claims.
